

Software Requirement Specification (SRS)

Library Management System

1. Introduction

The purpose of this system is to provide an online platform for managing library operations such as book search, borrowing, and returning.

2. Functional Requirements

- The system shall allow users to search for books by title, author, or ISBN.
- The system shall allow users to borrow and return books online.
- The system shall notify users of due dates and overdue books.
- The system shall allow administrators to add, update, and remove books.

3. Non-Functional Requirements

- The system must support at least 500 concurrent users.
- The system shall ensure 99.9% uptime availability.
- The system shall provide response times under 2 seconds for search queries.
- The system shall comply with GDPR data protection regulations.

4. Constraints

- The system must run on Windows and Linux servers.
- The database must be PostgreSQL.
- The system must integrate with the university's authentication system.

5. Ambiguities

- "Easy to use" is vague; usability metrics must be defined.
- "Fast performance" should specify measurable thresholds.

6. Appendices

Glossary:

- ISBN: International Standard Book Number
- GDPR: General Data Protection Regulation
